TECHNOLOGY / SCOPE:

Stainless Steel Fabrication - Design/Build Project

PROJECT HIGHLIGHTS:

Stainless Steel Fabrication of a Food Composter/Digester installed at the San Diego, CA Food Bank

ADDITIONAL DETAILS

This project involved procuring, fabricating, and assembling the stainless steel components for the specially designed composter/digester that was installed at the San Diego Food Bank. The stainless steel frame, composting vessel, and stainless steel skin of the unit were constructed in the fabrication shop, transported to California, and assembled at the San Diego Food Bank. The exterior skin of the composter was meticulously finished with a dual action air sander to provide the desired look, ensuring a uniform finish.
